

ABOUT US

30 YEARS' EXPERIENCE

Camper Eurogaza is a subsidiary of the Eurogaza Group, a company specialising in designing, producing and installing bodywork adapted for medical, police, emergency, bus and camper vehicles, as well as other special vehicles.

Over the past 30 years, the combination of experience and innovation has led our business group to the most demanding national and international and competitive markets.

LEADERSHIP AND COMPETITIVENESS

Camper Eurogaza currently
manufactures easily maintained vehicles
on the best models of the leading brands
on the market, always at a highly
competitive price.

COMPANY > ABOUT US

INFRASTRUCTURE

LARGE PRODUCTION CAPACITY

Our infrastructure exceeds 85,000 m², of which 10,000 m² are covered production facilities fitted with the latest technology. They include all the safety measures for our human team and they offer a large production capacity of up to 3,000 vehicles per year.

EFFICIENCY AND FLEXIBILITY

Moreover, our facilities have a 9,000 m2 customs warehouse with capacity for up to 900 vehicles. These warehouses allow us to offer our importers and exporters maximum efficiency and flexibility in marketing them.

LEVEL 3

MERCEDES BENZ + STELLANTIS

Camper Eurogaza has won prestigious awards, which Mercedes-Benz and Stellantis award only to companies that successfully pass their demanding assessment of the process of bodybuilding and transforming vans. The program assesses the quality, sales and aftersales service areas. Moreover, it has the "Van Partner" production quality seal, which represents the Eurogaza Group's great commitment to offering its customers the maximum guarantee.

Differential Advantages > ADAPTABILITY

CUSTOMISATION

Besides our standard series, our expertise allows us to offer designs customised according to the consumer's needs.

Both the design and configuration of our campers prioritise comfort, safety and adaptability.

And the materials used guarantee thorough, quick and effective cleaning of the passenger compartment.

PATENTED MATERIALS

The interiors are made of thermoformed ABS material, which is highly impact-resistant and has characteristic anti-bacterial and fungicidal specifications.

It is notable for its light weight, complying with the weight limitations of all international standards, thus guaranteeing the best mass ratio on the market. Its easy malleability makes it possible to maximise the interior space of any bodywork, while also optimising fuel consumption.

Differential Advantages > OPTIMISATION OF SPACE

EFFECTIVE CONFIGURATION

Our raised floors offer the highest resistance to use on the market, as well as excellent weight maintenance for our campers.

The location of the seats allows us to offer various configurations, guaranteeing perfect soundproofing of the cabin, comfort in the seats for all passengers and to maximise their safety.

MODULATION OPTIONS

Our camper vans can include up to two removable beds, which allows for as many as 4 modulation options in the sleeping area: living room, double bed, bunk bed and space for a bicycle or moped.

Differential Advantages > TECHNOLOGY

STRENGTH AND DURABILITY

Our technology and the quality of the materials used enable us to offer a vehicle with a longer life span, as well as minimising disinfection and cleaning times for the interiors. Also, the maximum strength and durability for the components that make up the cabin.

On the other hand, our campers have technical and customised designs for both private and professional use.

CANBUS SYSTEM > ACETECH™

All our campers are fitted with the CANBUS technology system to monitor the water tanks, batteries, lights and general condition of the vehicle. This system makes it possible to manage and monitor all the electrical equipment, which ranges from the heating to the exterior lights.

Of course, all our models comply with all international regulations covering this type of recreational vehicle.

Differential Advantages > SUSTAINABILITY

MAXIMUM EFFICIENCY

Thanks to their efficient design and the materials used our campers minimise fuel consumption.

The electrical installation is based on LED technology and offers the lowest consumption in the market. Besides a mixed system called Nolimits, consisting of two batteries, a base and another, auxiliary one, connected to solar panels that provide the vehicle with the maximum duration of use at full capacity.

INTERNATIONALISATION

MARKET

At Camper Eurogaza, we make a firm commitment to compete in markets offering the opportunity to implement our designs and technologies. That is why we have been chosen by customers throughout the world who are interested in our innovative, high-productivity methodology. At each destination we have adapted all our models to current regulations, to implement technologically-advanced campers in terms of safety, hygiene and user ergonomics.

IVECO > Structure

INNER LINING

- Floor with raised access floor.
- Interior lining in ABS thermoformed with projected high-density polyurethane.

IVECO > Furniture

- FURNITURE
- Poplar wood and PVC.
- Overhead cupboards.
- Kitchen unit with solid wood work surface.
- STORAGE
- Left-hand storage compartment for 6 kg bottle and clean water tank.
- Overhead shelf on the left-hand side in the bedroom area.

- ON SIDE
- Double-opening refrigerator 90L
